How to Make a Video Model!

Kaylea Hansen, M.Ed
Maureen Castillo, MA, CCC-SLP
Camille Harris, MA, CCC-SLP

Support from Kerrie Johnson, AT Paraprofessional

What you will Need:

-Script you want to model (Pragmatic skill. life skill, job skill, etc.)

-Visual supports for AAC user or verbal student who may need visuals (today we are using visuals made using Chat Editor)

-Camera to film (today we are using an iPad)

-Device or iPad with communication app (today we are using TouchChat 42 on iPad)

-iPad or Mac with iMovie on it

Script

Think through script you want to model. Can be specific to student user or more generic.

Samples we have provided for today:

- Conversation (What's your name? script)
- Life Skill (Ordering in a restaurant script)
- Vocational Skill (Pop Cart job script)

Customize to meet your needs! Is focus on Manners? Greetings? Closings?

We use the expanded social pages for WordPower from http://www.talcaac.com by Jill E Senner, PhD, CCC-SLP and Matthew Baud.

Script Sample

How much is it?

What kind do you have?

I will have a Dr Pepper please. Here's one dollar, do you have change?

Thank you.

Visual Supports using Chat Editor

This is a FREE download from Saltillo website : www.saltillo.com

What is Chat Editor?

Chat Editor is a supplemental program that has been provided for customizing the NOVA chat vocabulary on your Windows desktop or laptop computer. Although customizing is also possible on the NOVA chat device itself, the Editor allows the family and/or professionals to customize the vocabulary when the NOVA chat device is not present.

Note: Having the custom vocabulary on a computer is always recommended as a backup to the NOVA chat device
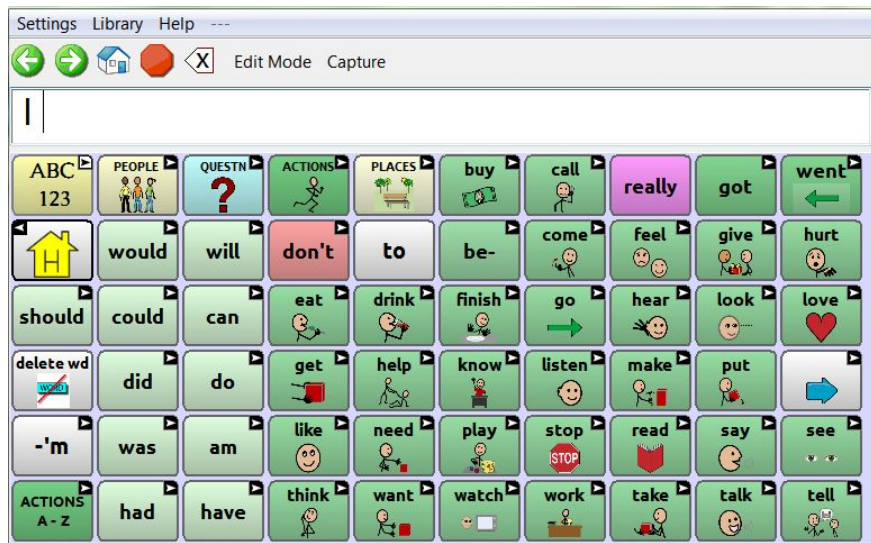

Select the vocab you want to open.
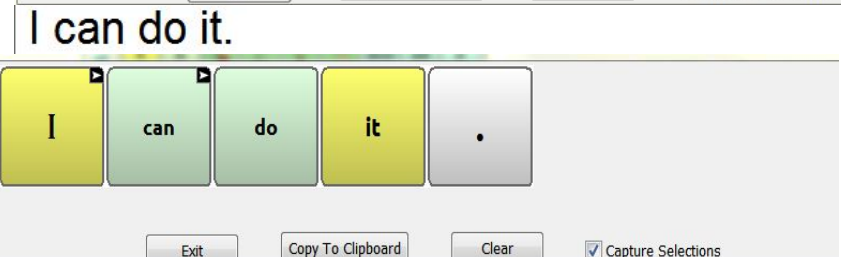

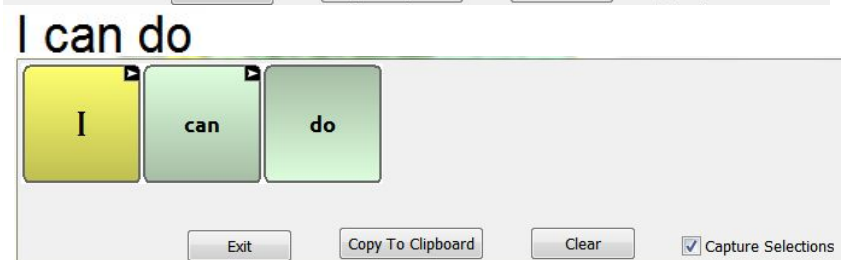

Your vocab is then displayed.
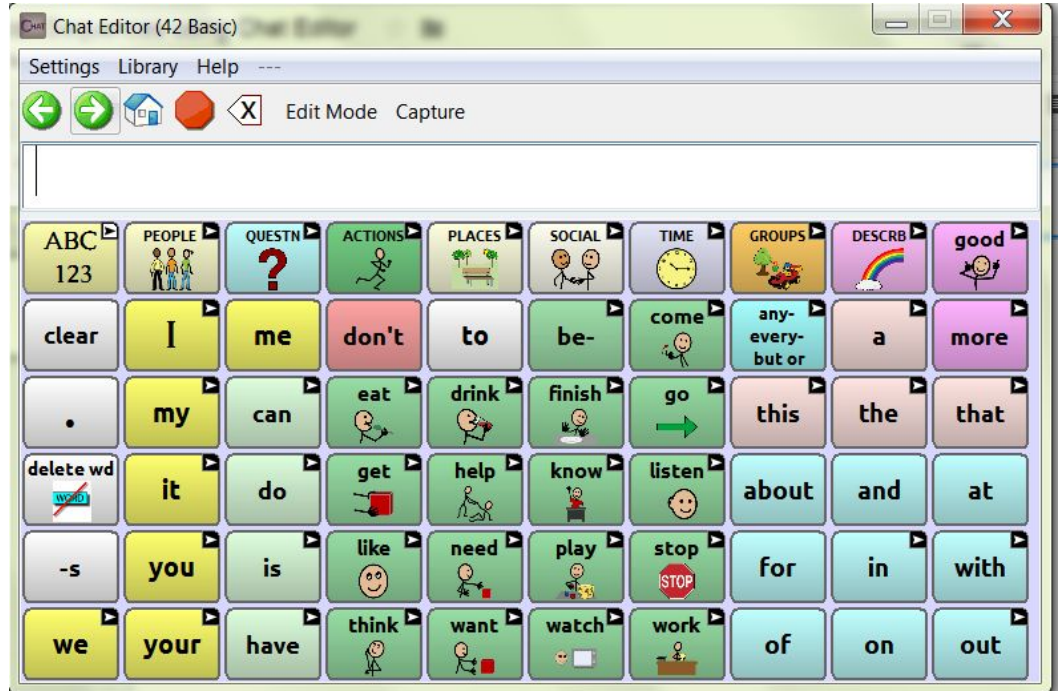

Select Capture to create you icon sequence.
Click on the buttons to create you sequence.

Chat Editor (42 Basic)

Once the sequence strip is completed, select Copy to Clipboard

Open the Google Silde that you made previously, right click, and select paste.The sequence strip is now on your slide.
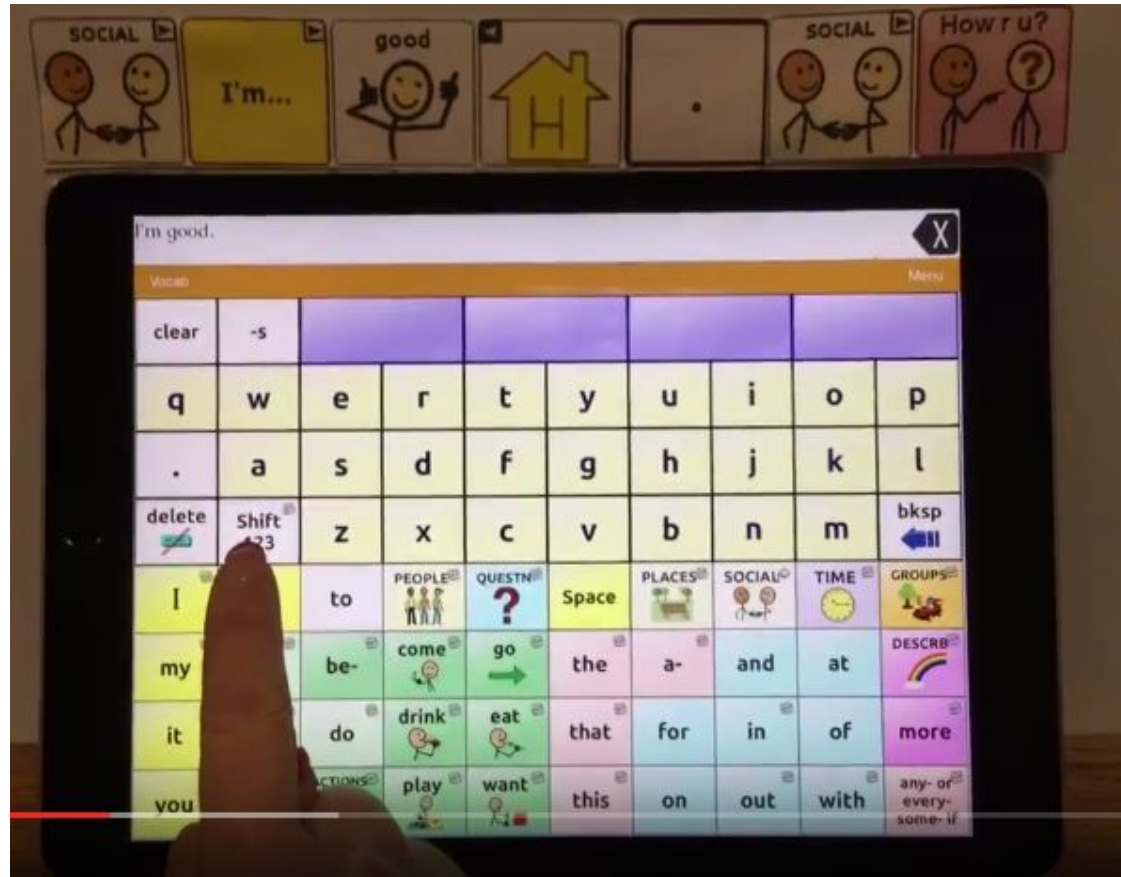

Repeat the process of copy to Clipboard and paste to Google Slide
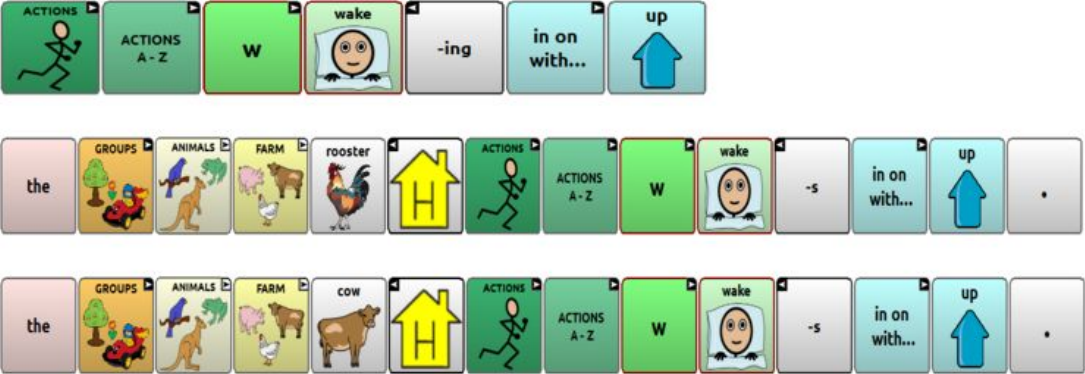

When finished; you can Print or Share your strips..

Let's watch a video model!

[Ordering in a Restaurant](#)

Film your Video Clips

Here are some tips:

- Quiet room with no distractions
- Lighting
- Add visuals to top of device
- Turn up volume on both devices!!!

At your tables, take the next 10 minutes to create your video clips. Choose a script, and one person films the visual prompted sequences while communication partner does finger pointing on device. For ease, tape script to top of iPad.

Second phase, one person films partner speaking verbal portions of script.

Step One

At your tables, divide into groups.

Everyone review script.

Find a "quiet corner" if possible!

One person records partner pointing to visual sequences. (Do all of them for your script! Change visual sequence for each video clip).

Step Two

In your group, film communication partner filming the "verbal" portion of the script!

Do all speaking sequences in script, but record them separately!

"Welcome to our restaurant. How are you today?" (one video clip!)

Stop recording

Next clip:

"I am fine. Thanks for asking. Are you ready to order?"

Ready, Set, Action!

10 Minutes to Make Video Clips! We are here to help! Find quiet spots, if possible

Assuming your iPad was purchased on or after September 1, 2013 and you've updated to iOS 8, you get iMovie for free. You should either have iMovie already installed, or you'll need to open the App Store app, search for iMovie, and install it for free.

Using iMovie

Open the iMovie app on your iPad once it's installed. To get started, tap the **"Projects"** tab and then tap the **"Create Project"** button.

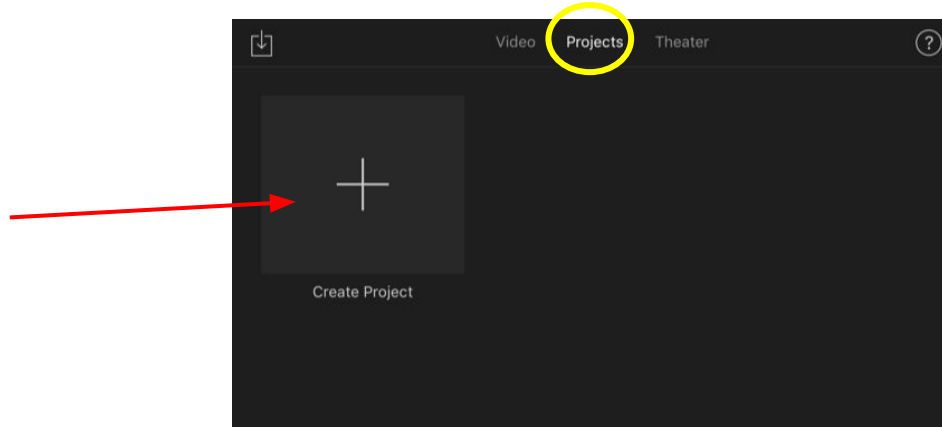

iMovie will allow you to create either a "Movie" or a "Trailer". A movie allows you to combine videos, photos, and music to create your own project. **Select Movie** to create a video modeling project.
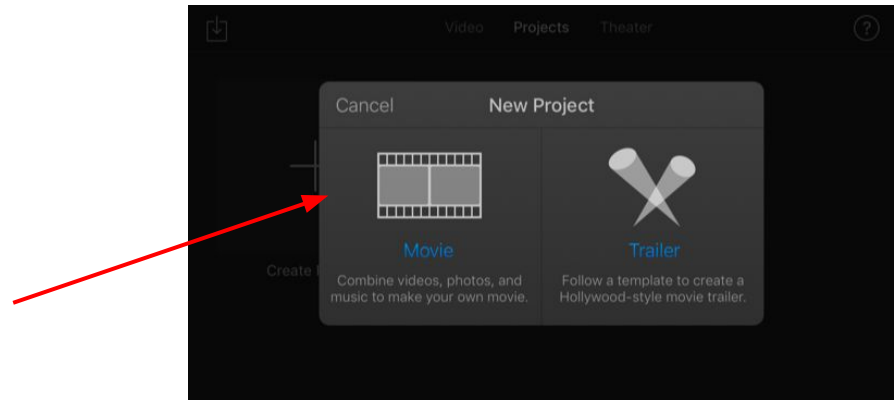

You'll be prompted to choose a theme. You can **choose any theme** to reflect your style. After you select a theme tap create in the upper right corner. (This is only for title page)!

You will see the full editing screen. Tap the "?" bubble at the top-right corner of the screen if you're not sure what a button does.
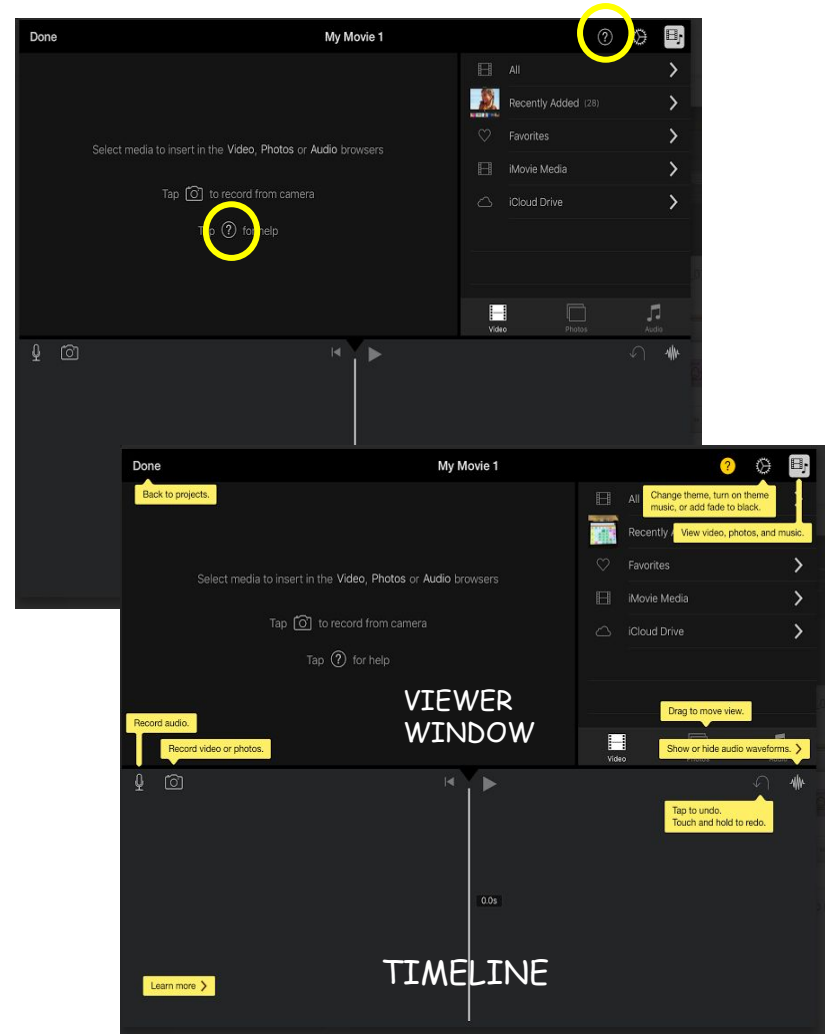

Inserting a video clip into the timeline

You'll want to tap the "**Recently Added**" button near the upper right corner to add videos and photos. However, you could also just start recording a video from here and insert your recorded clip directly into your iMovie project.
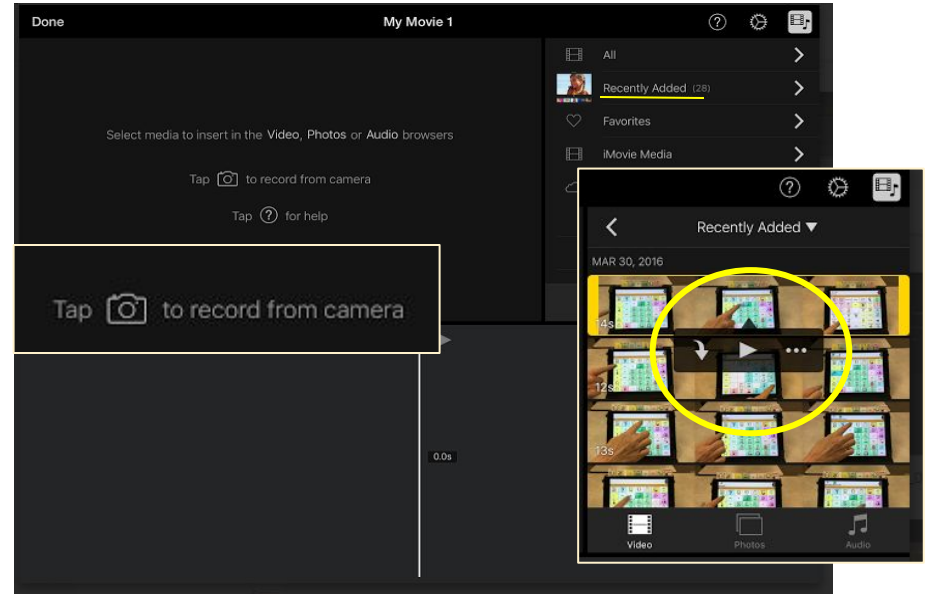

Tap the clip you want to insert.

Tap the icon button to **preview** it the clip

Tap the first icon to **insert** it as a video clip in the timeline
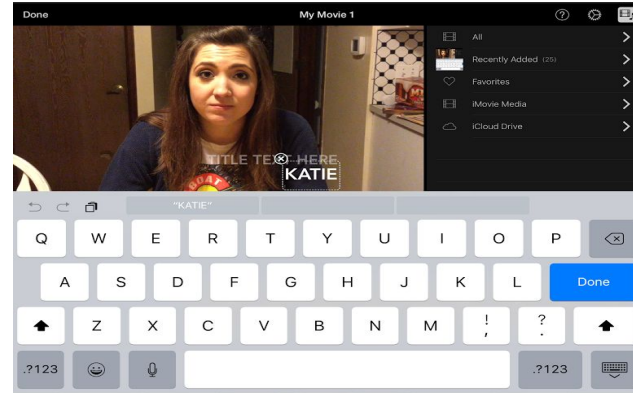

Create a Title

1. Double tap a video clip or photo in the timeline. The clip settings box appears.

2. Tap the "**Title**" option and choose the desired title by tapping on it.

3. Tap inside the title editor to access the onscreen keyboard. Type the text, and tap done.

A title icon will appear at the beginning of the clip.

Naming your Project

1. After you're finished with your clip, return to the project screen by tapping the "**Done**" in the upper left corner

2. Double tap the current name to bring up the onscreen keyboard. **Rename your project** and tap "Done" button on keyboard.

Finishing the Project and Sharing the Project

Once you are satisfied with your project, it's time to share it with others. Upload your clip to your Google Drive.

From the Edit screen, tap the Upload icon at the bottom of the screen.

Tap Google Drive

Tap Upload, the movie clip will be uploaded to your Google Drive.

After the upload is complete close iMovie.
Open your Google Drive.

Tap on your movie clip
.
Tap the menu icon in the upper right corner

Tap Add People and type in the name/s of the people you want to share with. A link will be sent to their email.
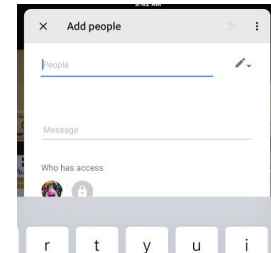

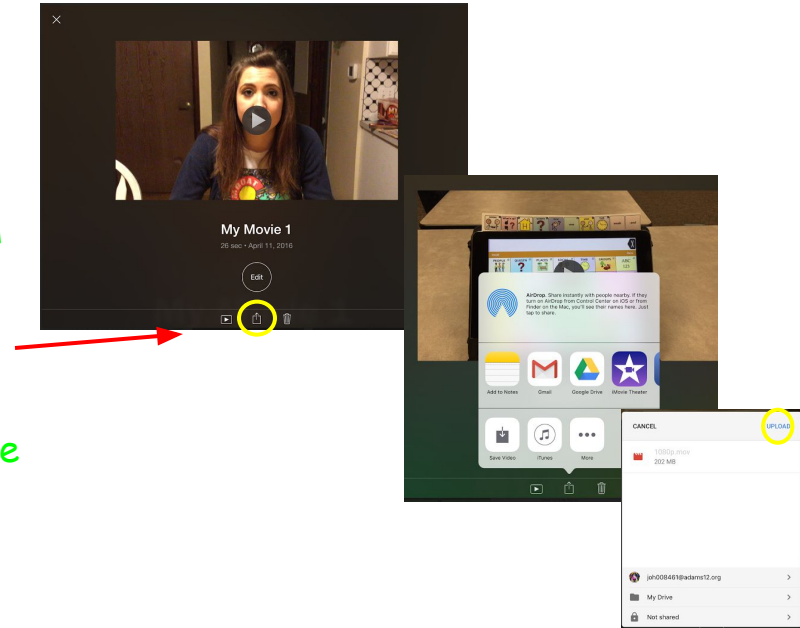

Make Video by Sequencing your Video Clips!!!

1. Open up iMovie
2. Tap on Projects in upper middle
3. Tap on + sign in upper right
4. Select Movie
5. Choose Theme
6. Tap on Create in upper right corner
7. Tap on "Recently Added" to find your clips
8. Preview a clip and then insert
9. Continue adding clips until model is complete
10. Create a title
11. Name your project (file) This can be the same name!
12. Share it!

Let's do it!

Special Editing Features!

1. Trimming a Video Clip
2. Splitting a Clip
3. Inserting a Clip
4. Precision Editing such as "Fade"
5. Deleting a Clip

Editing your video

Trimming a Clip from the Timeline

1. Tap on the clip you want to trim. The clip is highlighted with a yellow box with the trim handles at either end.

2. Slide the trim handles to the position where you want the video to begin or stop.

3. As you drag the handles, the new frame will appear in the viewer.

4. Tap anywhere outside the clip to deselect it.
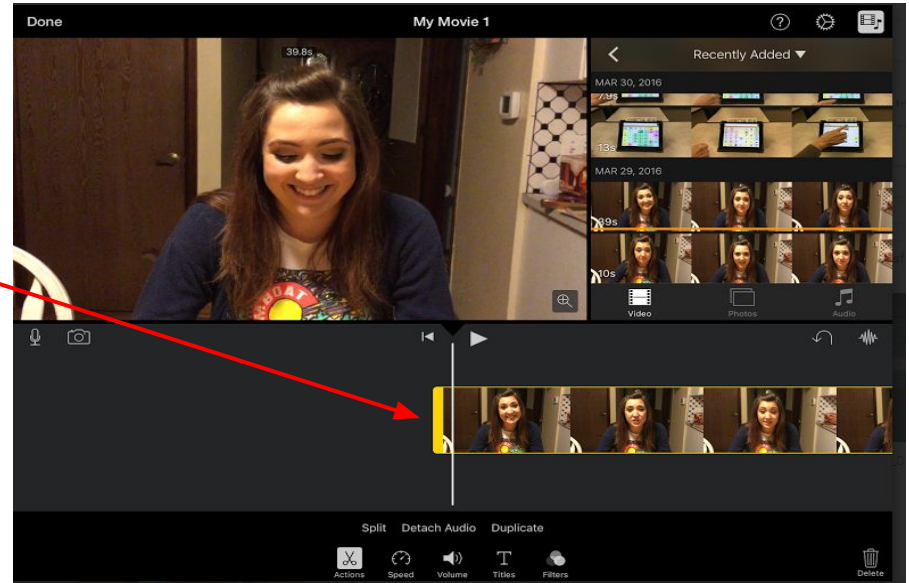

If you trim more of a clip than you intended, drag the trim handles to the position you want. iMovie does not actually cut or damage the original clips.
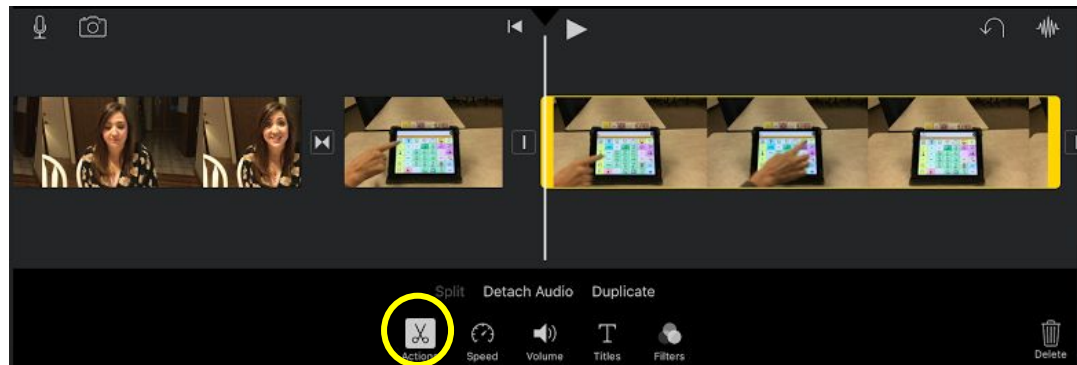

Inserting a clip into a clip on the timeline

After you split the clip, repeat the steps to insert a clip into the timeline.
Precision Editing

Tap on the clip, the clip will be highlighted in yellow.

Tap "Split", the clip will be split at that point.

Split   Detach Audio   Duplicate

Speed   Volume   Titles   Filters   Delete

Splitting a clip

Sometimes you may need to split a clip, to either remove unwanted frames, or insert another clip or photo in the middle.

1. Swipe the timeline to position the playhead in the frame you want to split.

2. Tap the clip to select it. You will notice the frame is highlighted in yellow.
3. At the playhead quickly swipe your finger down. iMovie will split the clip into 2 segments and place a transition between them.
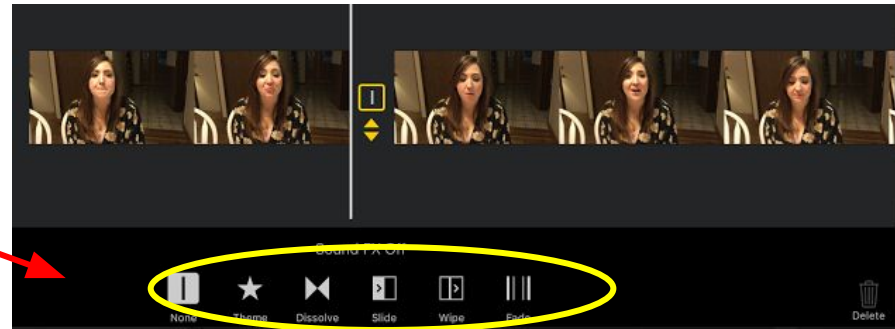

Deleting a clip from the timeline

 Sometimes you may need to remove a clip or portion of one from the timeline. Deleting a clip from the timeline will not delete the original clip from the Media Library. If you delete a clip that was recorded directly into the timeline, that clip will be permanently deleted.
 1. Touch and hold a clip until it lifts off the timeline.
 2. Drag the clip out of the timeline until you see the puff of smoke, then release.

 You can also double tap a clip.
 Tap trash can icon in the lower right hand corner.
 Undo and Redo- If you accidently delete a clip, make a gesture, or perform an action you didn't intend, there is a way to undo it by using the undo feature. You can use Undo as many times to get back previous changes in a session.
 Once you leave iMovie you will not be able to undo former changes. You can also shake the device and a notification will appear asking you if you want to undo the last command. You can continue to shake the device to get back the previous actions.
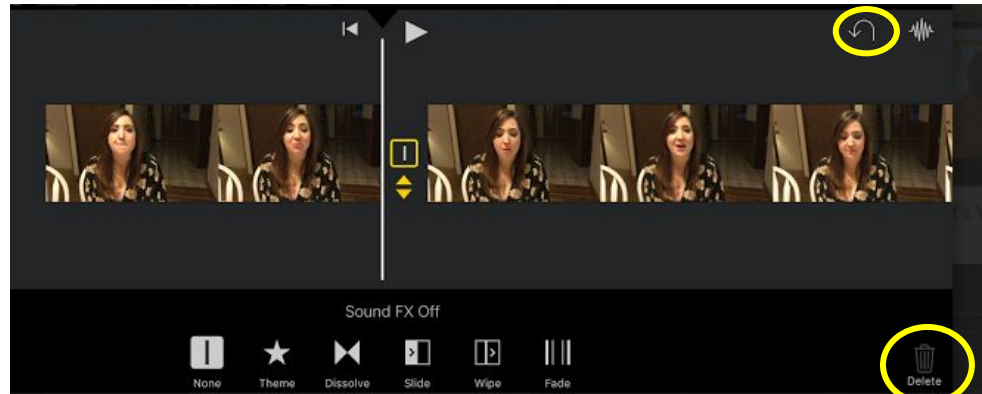

Using a PC

You don't have to have an iPad or Mac!

Free Options for PC:

- Windows Movie Maker
- Microsoft Power Point
